

## Homework5

The following figure illustrates the schema of data on Blackboard (more details see homework1):

Write a SQL query using the database (northwind.db) on Blackboard to get the number of category (**CategoryName**), the average of the unit price for each product(category) and rounded to 2 decimal places), minimum unit price for each category, maximum unit price for each category, and total units on order for categories containing greater than 10 products.

At the end, the order need ***ORDER BY CategoryId***

Your output should look like:

```
-- Beverages|12|37.98|4.5|263.5|60
-- Condiments|12|23.06|10|43.9|170
-- Confections|13|25.16|9.2|81|180
-- Seafood|12|20.68|6|62.5|120
```
